LOW RESISTANCE OHMMETERS

DUCTER® D7001

- True four-terminal, low-resistance measurement at high accuracy
- Internal rechargeable cells, 10 Ah total capacity, with built-in charger unit and battery condition indication
- Test current up to 10 A for repeatable results

Low Resistance Ohmmeter

DESCRIPTION

The DUCTER® D7001 Low Resistance Ohmmeter is a portable test set suitable for measurements down to 1 µΩ at 10 A d.c. It uses the four-terminal measurement principle; test leads with duplex hand spikes are provided, although alternative types of test leads are available.

The instrument will measure from 1 µΩ to 99.99 Ω in five ranges, each of which is selected by a rotary switch. Simple controls make the ohmmeter easy to operate. The readings are given directly in ohms with the decimal point correctly positioned. The 3 1/2-digit L.E.D. display has 12 mm (1/2 in.) high characters and is easy to read in poor lighting conditions.

The ON/OFF/LOCK switch has two "on" positions: a LOCK position for continuous operation and a momentary spring-held ON position that helps conserve battery power when taking a series of readings on the high-current ranges.

Variations in test current or battery condition will not result in loss of accuracy. A switch is used to reverse the connections to the potential terminals so that differences in reading caused by a suspected zero offset can be eliminated from a measurement. The condition of the digital display and the measuring circuit batteries is shown on a separate analogue panel meter.

The D7001 is completely self-

contained in a strong plastic case fitted with a detachable protective cover. The unit incorporates rechargeable battery cells and the charging circuit within the casing.

APPLICATIONS
The DUCTER® D7001 Low Resistance Ohmmeter is a stable, accurate and reliable instrument, yet tough and robust, and is well suited for use in the workshop, in installation and commissioning and in field servicing.

Example Uses

- Commissioning and maintenance of substation equipment (e.g., busbar joints and earth bonding, switch and circuit breaker contact resistance, base resistance and cold lap-welded joints in aluminium earthing strip)
- Testing transformer and motor windings
- Maintenance of overhead transmission lines (e.g., in testing points)
- Bond testing aircraft frames, including the bonding of electronic dischargers and fuel tanks
- Testing earth bonds in mines
- Rail bond testing, where a rail is used as part of a communication system or for power transmission
- Testing the integrity of lightning conductors

Other Models
Different measuring ranges and test

currents can be provided on other DUCTER® and BIDDLE® instruments, namely BT51, D007, D203 and DLRO® Low Resistance Ohmmeters, with test currents ranging from 1 to 100 A. The following DLRO instruments will be of particular interest:

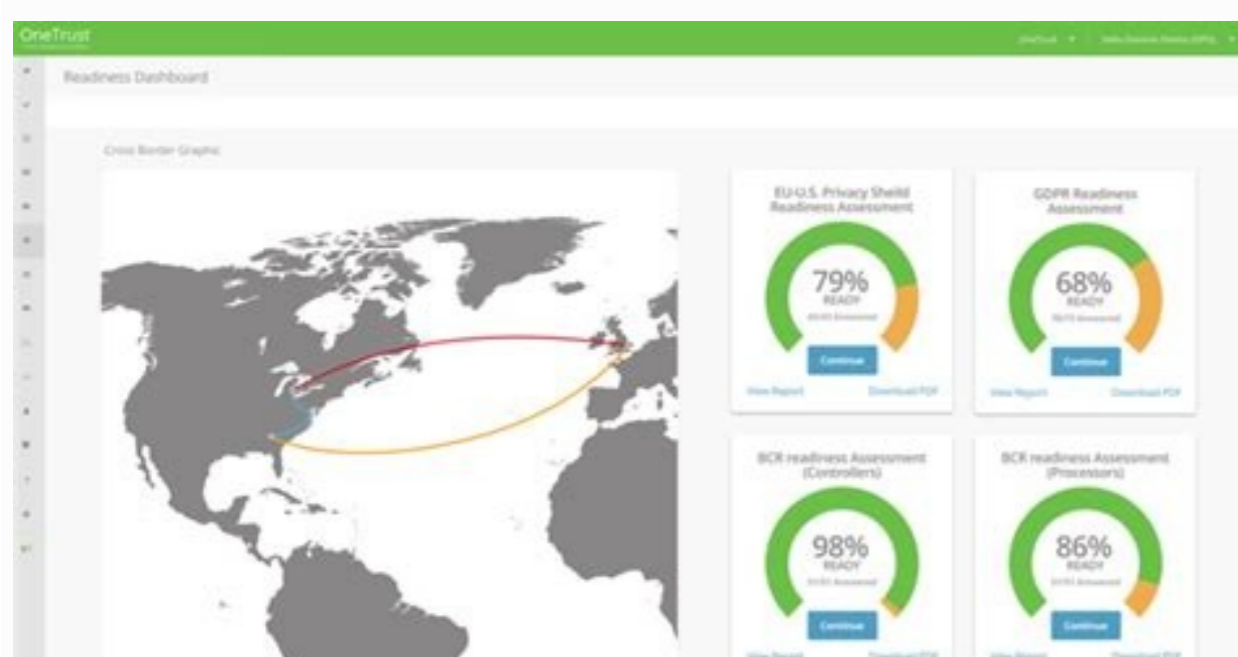

For high resolution DLRO 247002-47
Same as D7001 but able to measure down to 0.1 µΩ

For 100 A test current DLRO 247001-3-47
Same as D7001 but with an adaptor for a separate 100 A power supply (100 A testing is often required for switchgear testing to IEC 694.)

DLRO 247120-47
100 A power supply unit (operated from the mains supply)

For UPS battery testing DLRO 247001-11-47
Same as D7001 but includes input voltage protection (for testing battery strap resistances in UPS systems, etc.)

DLRO 247002-11-47
Same as DLRO 247002-47 but includes input voltage protection Tests carried out with the D7001 conform to the U.K. Mines and Quarries Act 1954 Conductance Tests. (The instrument is not suitable for use in explosive atmospheres.)

If the library has the book you need, you may have to request an impression of the pages, or take a photo of the information so that you have it after leaving the library. Then they stop. The company puts the owner's manuals in a line in PDF format so that the owners of their products can download them at any time that are necessary. They provide a ostile advice and shortcuts that save you extra time and work. Honestly, he trusted that this charger was water and waterproof. Clean battery terminals, taking care to avoid getting corrosive material in the eyes. AGO distilled water in each cup until the batterous of the battery specified by the Battery manufacturer. If you cannot find a downloadable owner manual on the company's website, look for a local distributor and contact them to request a manual. So they do wait and even cheap models remain in service for years. Will he work again? That is absolutely inútile. For a battery without cell tapas (free maintenance), follow the manufacturer's load instructions carefully. Study the specific precautions of the drummer manufacturer, such as elimination or not the elimination of cells of cells while loading, and the recommended load rates. Location of the loader locate charger so far the battery as the cables allow. never place the charger directly on the battery charged; the battery gases run and the damage charger. never let the battery acid leak into the charger. never operate charger in a closed area or restrict ventilation in way. Marine batteries must be removed and charged on shore. Do not set a battery on top of charger.
